Jacopo Foggini

General description:

It is a polymorphic lamp.

Sinuuous and slender with very long legs.

It is precious, coated with "pure gold". It

has a stem that branches out like a tree, the dynamics and proportions of an inverted chandelier.

The light is diffused by three small abat-jours, deliberately placed asymmetrically.

The structure is of hand-painted polycarbonate.

It is an artistic lamp, a sculpture.

Each lamp of Jacopo Foggini collection is a different sculpture from the others. Height, width, shape, color and distribution of matter, molded by hand, make each one precious and unique.

Each lamp has its own character, stylish and individual.

Technical description:

Structure in ABS and steel, hand painted whit gold effect.

Lamp shades in white cotton.

E14 lighting.
